Tri-fuel Generators from WINCO offer power when you want...

- a portable generator capable of running when gasoline fuel is unavailable
- a choice of three common power levels
- the flexibility to run on gasoline, natural gas or propane

**6000, 9000, or 12000 watts** of surge power on gasoline, the Tri-fuel series generators will fill most application needs. **HPS6000HE and HPS9000E optional accessories include** solenoid kit, generator cover, 2-wheel dolly kit, and battery charger.

**HPS12000HE options include** single-point lifting bar, solenoid kit, and battery charger. The HPS12000HE comes standard with a 4-wheel dolly kit.

# ACCESSORIES

**All-Terrain 2 Wheel Dolly Kit** - The ultimate in portability is provided in this accessory. The 8" diameter pneumatic tires get you through mud, snow, sand and soggy lawns. Durable grip handles assure easy maneuverability.

**Generator Cover** - This durable tailored cover is made of heavy canvas to protect your Home Power portable generator during storage or transportation. The custom generator cover protects your portable generator from moisture, dust, nicks and scratches. A built-in band keeps the cover in place in high winds. (Note: Cover cannot be used with Wheel Kit.)

**Line Voltage Monitor** - This compact voltmeter can be plugged into the 120 volt receptacle on any Home Power portable generator to assure you that your generator is functioning properly or assist you in isolating continuity problems in extension cordsets.

**Emergency Transfer/Service System** - The ET/S System allows 120/240 volt rated Home Power portable generators to be quickly and safely connected to a building electrical panel for emergency/standby service during a power outage. A weatherproof NEMA 3R enclosure, with hinged cover and padlock to prevent unauthorized access, contains a 12-foot cord with a special twist-lock plug. The enclosure is mounted on the outside of the building and stores the cordset when not in use. A quality Square D circuit breaker load center, with interlocked generator and utility main breakers to prevent feedback to the utility, installs next to the building electrical service panel. Four 120 volt (or 8 tandem) or two 240 volt branch circuits or a combination of the two, can be connected for emergency service.

**Low Pressure Fuel Solenoid (12 volt)** - Units that are intended to be run unattended or for long periods of time must have an electric fuel solenoid installed in the fuel line close to the generator. This solenoid is a positive flow shut-off valve which shuts off the fuel should the engine unexpectedly stop running, preventing costly and dangerous fuel leakage at the connection point.

**NOTES: (1) Based on gasoline fuel. Derate 10% for L.P. gas, 20% for Natural Gas. (2) Code G capacitor start motor. (3) Electric start models include battery rack and cables. Battery not included. (4) COMMERCIAL OR PRIME POWER WARRANTY - 90 Days, INTERNATIONAL WARRANTY - Contact WINCO for details.**
